

Potato masher Spirit

Description

The practical potato masher Spirit stands out for a significant improvement in mashing performance. Thanks to the special geometry of its slots and narrow struts, it delivers an exceptionally fine and even mash in a very short time and with minimal effort.

The mashing plate is also asymmetrical and designed with varying radii. This ensures that one side always adapts optimally to the shape of the vessel, allowing efficient work right up to the edge—even in narrow or angular containers.

For easy storage and thorough cleaning, the mashing plate is removable.

The potato masher is made of stainless steel, featuring a handle made from GreenGrip plastic, produced from recycled used cooking fats and renewable raw materials.

Dishwasher safe.
